

Regulatory Aspects of Permitting

- Approval Process
- How many internal departments are involved?
- Which pipeline are you in?
- Do you know what the other pipelines are?
- Do the internal department regulations differ?

How & Who - Review & Approvals

- Who receives the approvals in your organization?
- How many departments are involved in the approval process?
- Is there a check off system to assure all lower level reviews were done?
- How good are your inter-department lines of communication?

Stormwater is a Subset of the Planning Process & Approvals

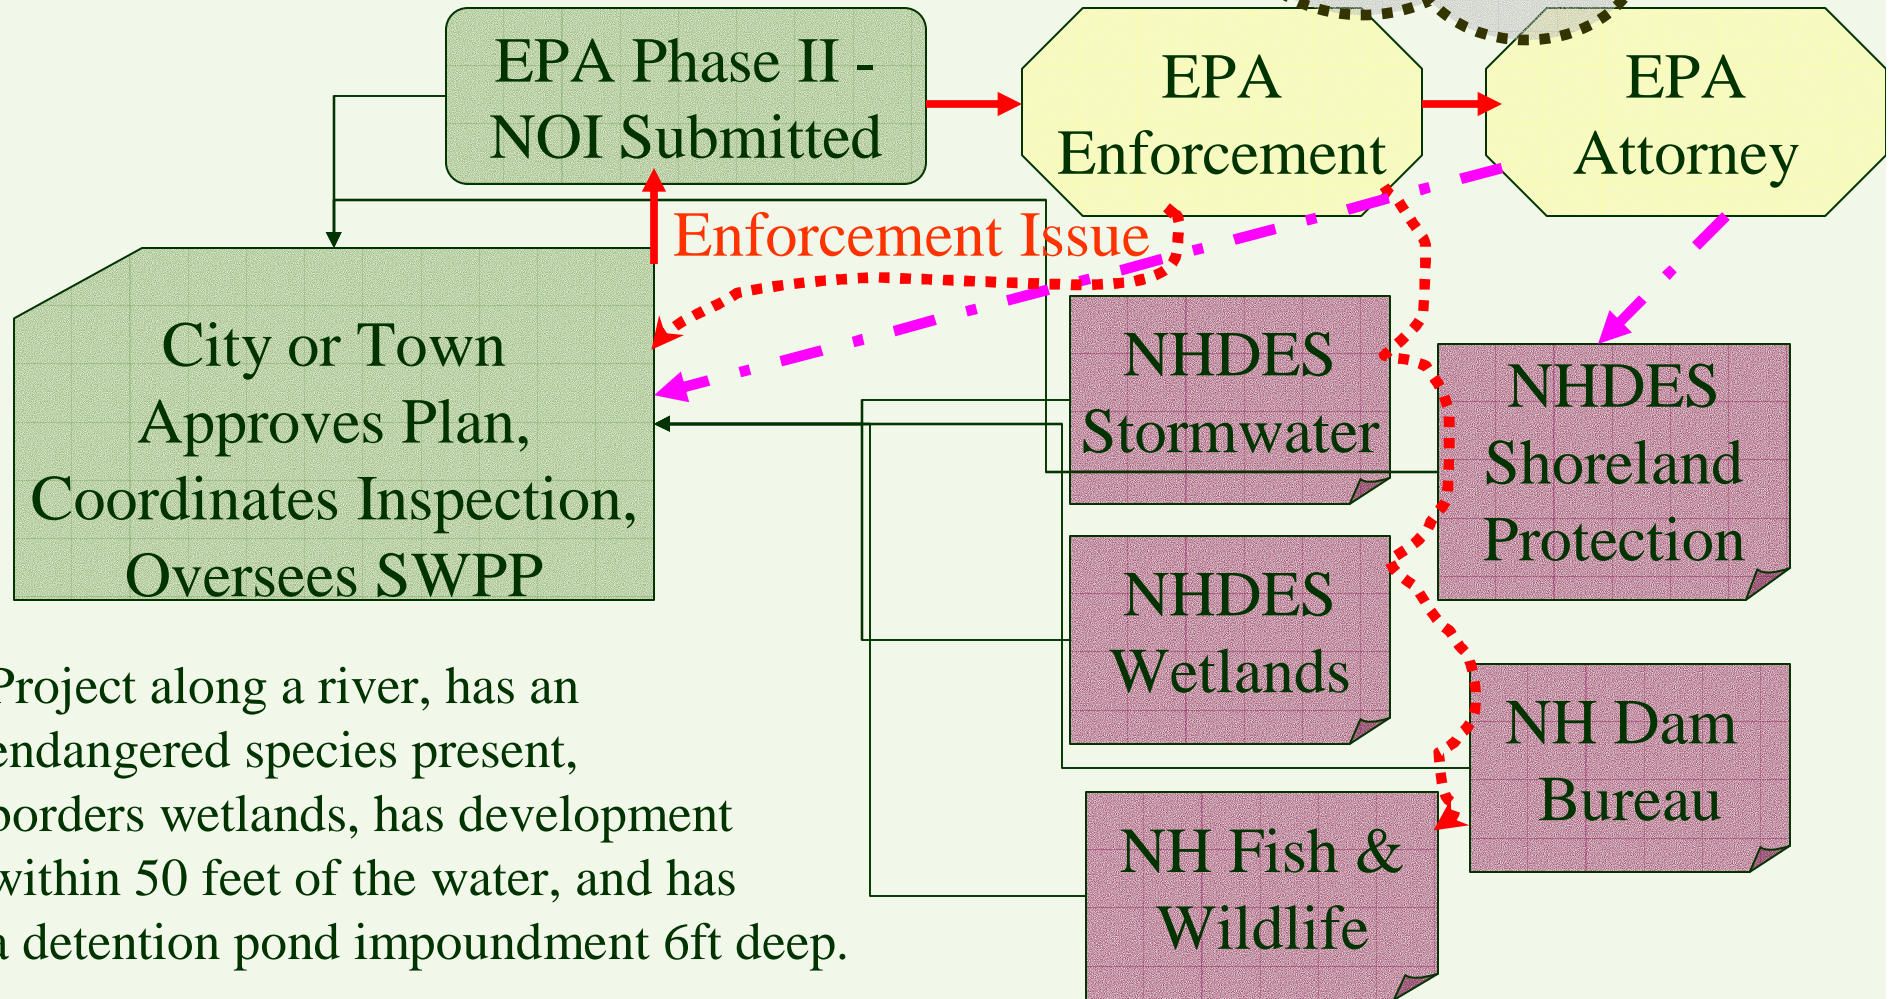

- In the Manchester situation, the stormwater position would be well informed if it was under planning.
- The stormwater manager has to coordinate with planning to assure all information is coordinated.

Federal & State Influence

- Once the internal network has been worked out (and believe me that will be a long process!), you have to look at the regulatory side.
- Now we know it can't be as complicated as the City end....or can it?

Regulatory Interaction

Owner's attorney
muddies the waters
with jurisdictional
authority

Project along a river, has an endangered species present, borders wetlands, has development within 50 feet of the water, and has a detention pond impoundment 6ft deep.

How Do I Prepare?

- Find out early who all the internal players are
- Ask the internal players if they've had any interaction with state or federal agencies
- Be prepared for surprises
- Each time you find a broken link, work that into the notification protocol
